RAFIN HASAN

Frontend & Full-Stack Developer | Computer Science Undergraduate

London, United Kingdom • Phone: +44 7385 732516 • Email: rafinhasan.web@gmail.com / hasanrafin13@gmail.com
Portfolio: rafin-dev (dot) vercel (dot) app • GitHub: Rafin-Hasan

PROFESSIONAL SUMMARY

Ambitious, product-focused Frontend Developer and Computer Science undergraduate eager to launch a full-time software engineering career. Proven track record of architecting high-performance, interactive, and visually immersive web applications utilizing Next.js, React, Vite, TypeScript, and Tailwind CSS. Experienced in building interactive simulations, telemetry dashboards, real-time audio-visual interfaces, and distributed system playgrounds. Driven by clean code architecture, sub-millisecond interface responsiveness, and modern developer tooling.

TECHNICAL SKILLS

- **Frontend Technologies:** React.js, Next.js, Vite, TypeScript, JavaScript (ES6+), Tailwind CSS, HTML5, CSS3, Responsive Design
- **Specialized Web APIs & UI:** Web Audio API, Canvas/SVG Micro-interactions, Real-Time Telemetry Visualizations, State Synchronization
- **Backend, APIs & Cloud:** REST APIs, Distributed Edge Database Concepts, Firebase, Vercel, Node.js
- **Developer Tools & Workflow:** Git, GitHub, Vite, npm, VS Code, CI/CD Deployment
- **Core Competencies:** Component-Driven Architecture, Interactive UI Simulation, Performance & Latency Optimization, Accessibility
- **Languages:** English (Fluent), Bengali (Native)

FEATURED PROJECTS

1. TracePulse — Real-Time Observability & Telemetry Platform

Technologies: Next.js, React, Vercel

- Built an observability marketing and product interface tracking live network requests, LLM execution calls, and system telemetry in real time.
- Engineered an interactive telemetry dashboard with a trace waterfall timeline visualization and an instant dynamic pricing calculator.

- Optimized for high-throughput client updates and sub-millisecond data rendering using Next.js and React.

2. AetherDB — Distributed Edge Database Interactive Playground

Technologies: React, Vite, Vercel

- Designed a multi-page product site featuring an in-browser live SQL execution playground for edge databases.
- Built a visual, interactive Raft consensus cluster simulation allowing users to simulate node failures, partition breaks, and automated cluster healing.
- Integrated an interactive usage-based billing estimator with dynamic algorithmic pricing tiers.

3. Tactile Task Console — Sensory-Driven Physical Desk Manager

Technologies: React, Vite, Web Audio API, Cross-Device Sync

- Implemented a skeuomorphic productivity console featuring an interactive dial combination lock vault to access user workspaces.
- Integrated the Web Audio API to deliver low-latency tactile audio feedback on mechanical knob turns and vault triggers.
- Built organization systems for folders, focused timed sessions, and countdown challenges designed with persistent state synchronization.

EDUCATION

BSc in Computer Science | Oct 2024 – Present

University of Roehampton — London, United Kingdom
Core Focus: Software Engineering, Algorithms & Data Structures, Distributed Systems & Web Technologies

Foundation in Science | Sept 2022 – Sept 2023

Lincoln University — Malaysia
Core Focus: Mathematics, Physical Sciences, Computing Principles

TECHNICAL EXPERIENCE & INDEPENDENT ENGINEERING

Frontend & Interactive Web Engineering | Oct 2024 – Present

- London, United Kingdom
- Architected dynamic single-page and multi-page web applications using React, Next.js, and Vite, prioritizing minimal bundle sizes and fluid 60 FPS interactions.

- Integrated modern browser APIs (including Web Audio API and real-time visualization models) to build memorable user experiences.
- Maintained clean Git version control workflows, automated Vercel deployments, and cross-browser testing suites.
